

ALBERT LIVINGSTAN G

SOFTWARE ENGINEER | MACHINE LEARNING | FULL-STACK DEVELOPER

OBJECTIVE

Motivated Computer Science Engineering student with strong foundations in software development, Java, Python, Data Structures & Algorithms, and cloud computing. Hands-on experience in full-stack development and machine learning, with a passion for building scalable, efficient, and user-friendly applications. Seeking the role of Specialist Programmer to contribute technical expertise while continuously learning and growing.

EDUCATION

B.Tech, Computer Science and Engineering

Jun 2023 – May 2027 (Expected)

cgpa(5.92)

Karunya Institute of Technology and Sciences

Coimbatore, Tamil Nadu

HSC, Biology

Completed May 2023

percentage(68.67%)

Presentation Convent Matriculation Higher Secondary

Coimbatore, Tamil Nadu

SKILLS

- Python, JavaScript, Java
- React, Firebase, TensorFlow/Keras, REST APIs
- Google Cloud Platform, Kubernetes
- MongoDB, MySQL
- Git, Docker
- Log Analysis, Team Collaboration, Time Management

CERTIFICATIONS & ACHIEVEMENTS

Google Cloud Platform (GCP)

Hands-on labs: VPC, Cloud SQL, Managed Instance Groups, IAM, Load Balancing

Google Certification

Foundations of Digital Marketing and E-commerce

Scopus-Indexed Conference Paper

AQI Jet research paper — status: under review

INTERNSHIP

Cybersecurity Intern — Cisco

28 Mar 2024 – 28 Jun 2024

- Analyzed log files for suspicious activity related to cybersecurity events
- Monitored network traffic for malicious or unauthorized activity
- Developed and implemented security protocols to protect corporate networks and systems

Python Web Developer — Nexus Global Solutions

2 Jun 2025 – 2 Jul 2025

- Developed and deployed web applications using Python with backend and database integration
- Built responsive UI and integrated it with server-side functionality
- Implemented REST APIs, form handling, and session management

PROJECTS

AQI Jet — AI-Driven Geospatial Air Quality & Solar Optimization Platform (Live: aqi-jet.vercel.app)

- Built and deployed a real-time air quality prediction system comparing multiple ML architectures; ConvLSTM2D achieved the best performance ($R^2 = 0.97$)
- Designed an original Environmental Sustainability Decision Index (ESDI) combining AQI and solar generation potential into a single actionable metric
- Built full geospatial data pipeline and system architecture; authored accompanying IEEE-format conference paper for Scopus submission

Session-Aware Hybrid Recommender System — Capstone Project (In Progress)

- Designing a hybrid recommendation architecture targeting cold-start mitigation in e-commerce, with a case study on Indian consumer behaviour patterns
- Evaluating on Retailrocket, YooChoose (RecSys 2015), and Multi-Category Store datasets, with a synthetic augmentation strategy for Indian-context behaviour

StudyHub —(Live: gcp-dusky.vercel.app)

- Built a React/Firebase web platform covering six engineering subjects with an integrated admin panel
- Integrated the Claude API to provide AI-assisted study support for students
